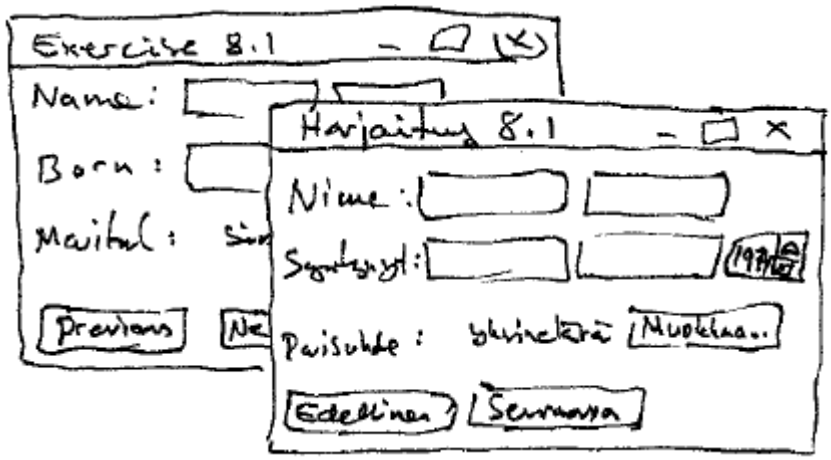
Exercise 8.1 (Small 3/2 points)

Take one of your earlier implementations of Person information editing application (e.g, 6.1) and internationalize it:

translate the user interface to another language in addition to English.



With Java: use NetBeans tools to put all the user interface texts into a resource bundle

With React, include an option into interface for the user to choose the language. (With Java, the default local may be used to choose between the languages.)
